

Toyota Forklift Parts

Toyota Forklift Part - Ever since 1992, Toyota Material Handling inc., U.S.A., also called TMHU, have been the top selling lift truck dealer in the U.S. Proudly celebrating more than 40 years of service, the Irvine, California established company provides a complete line of quality lift trucks. Stemming from their reputation of excellence, reliability, and sturdiness, Toyota remains prevalent in this competitive market. Quality is the keystone of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S. are built here.

Every one of Toyota's manufacturing plants within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its commitment to continuous progress and its environmentally friendly systems. It is the first and only manufacturer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For instance, the Toyota 8-Series IC lift vehicles emit 70% less smog forming emissions than the existing centralized EPA standards and have complied with California's strict emission standards and regulations.

TMHU, U.S.A. - Leading the Industry

The head of Toyota Material Handling, U.S.A., Brett Wood feels that TMHU's achievement comes from its commitment to manufacture high quality lift trucks while offering superb client assistance and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also known as TICO, is listed in Fortune Magazine as the world's leading lift truck supplier and is amongst the magazines celebrated World's Most Admired Companies.

Redefining Environmental Accountability

Toyota Industries Corporation, as the parent company, has instilled a rich company doctrine of environmental stewardship in Toyota. Not a lot of other organizations and no other lift truck manufacturer can match Toyota's history of protecting the natural environment while concurrently stimulating the economy. Environmental responsibility is a fundamental characteristic of company decision making at Toyota and they are proud to be the first and only maker to offer UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift vehicles. Yet another reason they remain a leader within the industry.

In 2006, Toyota launched the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission values, and also meets California's more involved 2010 emission standards. The finished invention is a lift vehicle that produces 70 percent fewer smog forming emissions than the current Federal standards tolerate.

Furthermore in 2006, Toyota established a partnership with the Arbor Day Foundation, furthering their obligation to the environment. Greater than 57,000 trees have been planted in regional parks and national forests damaged by ecological causes such as fires, as a product of this partnership. 10,500 seedlings have also been scattered through Toyota Industrial Equipment's network of dealers to non-profit organizations and neighborhood customers to help sustain communities all over the United States

Toyota's lift trucks offer enhanced durability, visibility, output, ergonomics, and all the leading safety technology that has made Toyota an industry leader. The company's System of Active Stability, also referred to as "SAS", helps limit the chance of accidents and injuries, and increasing productivity levels while minimizing the likelihood of merchandise and equipment damage.

System Active Stability is able to discern circumstances that could lead to lateral volatility and potential lateral overturn. When any of these factors have been detected, the SAS will immediately engage the Swing Lock Cylinder to re-stabilize the rear axle. This transitions the lift truck's stability trajectory from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the probability of a mishap from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also helps to avoid injuries or accidents while adding durability.

The SAS systems were originally adopted on the 7-Series internal combustion lift vehicles which were put on the market in 1999. These systems helped propel Toyota into the lead for industry safety standards. Now, SAS is utilized on practically every new internal combustion products and is standard equipment for the new 8-Series. There are more than 100,000 SAS-equipped lift trucks in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with mandatory worker training, overturn fatalities across all models have decreased by 13.6% since 1999. Also, there have been an overall 35.5% fall in industry wide collisions, loss of control, falls and tip overs from a lift vehicle for the same period.

Toyota's hardnosed standards continue far beyond the machinery itself. The company believes in providing extensive Operator Safety Training services to help clients satisfy and exceed OSHA standard 1910.178. Instruction courses, videos and assorted materials, covering a broad scope of matters-from personal safety, to OSHA rules, to surface and cargo situations, are accessible through the vendor network.

Ever since the transaction of its first lift truck in the U.S. to the manufacture of its 350,000th lift vehicle produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has continued a solid existence in the U.S. This fact is demonstrated by the statistic that 99% of Toyota lift trucks sold in America now are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of production facilities over 126 acres of property.

Facilities include a National Customer Center, as well as manufacturing operations and distribution centers for equipment and service components, with the entire investment exceeding \$113 million dollars.

The contemporary NCC was designed to serve TMHU clients and sellers. The facility includes a 360-degree display room, a presentation theater complete with stadium seating for 32, an area for live product demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's story since the birth of its originator, Sakichi Toyoda, in 1867, and lastly a training center.

TMHU has 68 official industrial equipment dealers, along with 189 dealership locations throughout the United States, offering the most complete and inclusive customer support and customer service in the industry. The company's new and Licensed Used lift vehicles, service, components, and financing features make Toyota dealerships a one-stop shop to guarantee total client satisfaction.
